

KHEL-O Tester Checklist

UI/UX, booking, payment, owner portal and admin payables. Test site: dev.khel-o.com (test payments only).

Tester: _____ Date: _____ Device / Browser: _____ Build: _____

How to mark: tick the box when it works. If it fails, leave the box empty and write the bug in the Notes column with a screenshot name. Section 7 (admin marks café as paid with UTR + proof) and section 3/4 (slider and payment) are the highest priority.

0. Before you start

	Check	Notes / Bug #
1	☐ Test only on dev.khel-o.com (never the live site). Use a real phone (Android Chrome and, if possible, iPhone Safari) AND one desktop browser.	
2	☐ Razorpay is in TEST mode on dev: use UPI id success@razorpay (success) and failure@razorpay (failure), or Razorpay test cards. No real money moves.	
3	☐ You need 3 logins: a Customer (Google sign-in), an Owner, an Admin. Note which is which in every bug report.	
4	☐ For every bug write: page, what you did, what you expected, what happened, device + browser, and attach a screenshot or screen recording.	
5	☐ Tick the box only when it works. Write FAIL and the bug note beside anything that does not.	

1. Campaign link and homepage welcome pop-up (Customer, logged out)

	Check	Notes / Bug #
1	☐ Open dev.khel-o.com/redeem/KHELOSPECIAL in a fresh/incognito window. It lands on the HOMEPAGE (not an ad-style page).	
2	☐ A welcome pop-up appears, centred, with the badge animating (glow/sparkle). It is not hidden behind the cookie banner.	
3	☐ Pop-up lists the partner cafés with "Save up to ₹X" amounts. No fake counter ("only N left") anywhere.	
4	☐ Close with the X and with Esc (desktop). Reload: the pop-up does NOT show again.	
5	☐ "Sign in to claim your badge" goes to login and, after Google sign-in, returns to the homepage.	

6	☐	"See all prices" opens the prices page. Prices are readable, grouped by activity, no duplicate identical blocks.	
7	☐	Tap Share on the prices page. Share sheet/modal opens and the copied link opens the homepage welcome again.	
8	☐	Open the link while already logged in (use a different new account): pop-up says "Badge claimed!".	
9	☐	Badge shows on Profile and on the Rewards page, with +100 XP. Claiming again does not give a second badge or XP.	
10	☐	Turn on "reduce motion" in phone settings: animations stop but the pop-up still works.	

2. Explore, café page and offers (Customer)

	Check	Notes / Bug #
1	☐	Explore cards show the best-deal label where a café has an offer; cafés without offers show nothing odd.
2	☐	Café page: "Offers here" strip lists the live offers; the setup card shows the offer badge and discounted price with the original struck through.
3	☐	The sticky bottom bar price MATCHES the selected setup card (e.g. card ₹99 -> bar ₹99, never the old ₹150).
4	☐	Check each setup (PS5, PS4, Racing, VR, PC): select it and confirm the card price and the bottom bar agree.
5	☐	Weekday special (Dhurandhar Gaming): shows only on Mon-Fri; on Sat/Sun it is not offered.
6	☐	Prices to verify (DG): PS 1 player 150 -> 120, 2 players 220 -> 180, Racing 200 -> 150, weekday single 99/hr, weekday multiplayer 75 per player/hr.
7	☐	Prices to verify (Rockstar): PS5 15/30/60 min = 39/69/119; VR = 89/169/299; Racing = 59/119/199 (offer prices).
8	☐	Tapping a café from the pop-up / campaign page opens the right café.

3. Time slider and booking flow (Customer)

	Check	Notes / Bug #
1	☐	Slider drag is smooth: no jumping or the whole bar rescaling while a handle is held.
2	☐	Drag the right handle a long way: the track scrolls along near the edge and the duration keeps growing (no need to lift your finger).

3	☐	Drag the left handle and the middle (move the whole session): both feel natural and snap to valid times only.	
4	☐	Quick-length chips (15 min, 30 min, 1 hr, 1.5 hr, 2 hr, 3 hr, 4 hr): one tap sets that length. Chips that do not fit before closing time are hidden. Selected chip is highlighted.	
5	☐	+ / - buttons still work. The minimum length for the setup is respected (cannot go below it).	
6	☐	Booked/blocked slots are visibly different and cannot be selected or dragged over.	
7	☐	Vertical page scroll over the slider still works (does not get stuck).	
8	☐	Number of players / co-op option: price updates correctly (co-op uses shared-console pricing).	
9	☐	Checkout summary: original price, offer discount, 4% platform fee, total. Offer is applied automatically (no code needed).	
10	☐	If more than one offer qualifies, the best one is applied and you can tap to switch. Near-miss message ("add 30 min to save more") has a one-tap fix.	
11	☐	"Have a code?" link: a wrong code shows a clear error; a valid code applies.	
12	☐	Offer that has just ended or a limit reached: shows a friendly message, not a crash.	

4. Payment (Customer, Razorpay TEST)

Check		Notes / Bug #
1	☐	Pay with success@razorpay. After paying, you land on a success screen and the booking shows CONFIRMED with a QR/booking code.
2	☐	Start a payment, choose UPI, then press Back/cancel BEFORE paying: no "confirmed" booking is created and the slot is released after the hold time.
3	☐	Pay with failure@razorpay: clear failure message, you can retry, no duplicate booking, no money shown as paid.
4	☐	Pay, then refresh/close the tab immediately: booking still ends up confirmed (webhook backup). No red "Cannot verify payment" error.
5	☐	Double-tap Pay quickly: only one booking/payment is created.

6	☐	Confirmation email/notification arrives (if enabled) with correct café, time, amount.	
7	☐	My Bookings: the booking appears with the right status, amount paid, and offer applied. The amount paid = discounted price + 4% fee.	
8	☐	Cancel a booking (if allowed): refund rules/message match the policy shown, status updates.	
9	☐	Two customers try to book the same slot at the same time: only one succeeds, the other gets "slot no longer available".	

5. Owner portal (Owner login)

	Check	Notes / Bug #
1	☐	Dashboard numbers (today bookings, earnings) are plausible and match the Bookings list.
2	☐	Bookings list: the new test booking appears with the correct customer, setup, time and amount. Scanner/check-in with the booking code marks it checked in; scanning twice is rejected.
3	☐	Offers page: the campaign block shows the campaign offers using the same rows/prices customers see (regular price -> offer price).
4	☐	Create a new owner offer (percentage, fixed amount, fixed price). Validation messages are clear; it appears on the customer café page.
5	☐	Edit and disable an offer: customer side updates (offer disappears, price returns to normal).
6	☐	Insights / Analytics page loads and the figures are in plain language and not broken.
7	☐	Tiers/Setups: change a price, save; customer side shows the new price. Min/default booking minutes behave.
8	☐	Availability / blocked slots: block a slot; customer cannot book it.
9	☐	Notifications arrive for a new booking.

6. Owner payouts / money screen (Owner login)

	Check	Notes / Bug #
1	☐	Payouts page shows three amounts: Pending settlement, Outstanding (what KHELO owes you), Paid so far. They add up with the bookings listed.

2	☐ For a booking with an offer: the owner amount = price AFTER discount (the café bears the discount). The 4% platform fee is paid by the customer and is NOT deducted from the owner.	
3	☐ Payout destination (UPI/bank) can be added/edited; saved details show masked (bank number partly hidden).	
4	☐ Changing payout details after a payout was recorded does NOT change old payout rows.	
5	☐ After admin records a payment (section 7): the payout row appears in history with Status = Paid, the UTR number and a working "View" proof link.	
6	☐ Status labels read correctly: awaiting transfer, processing, paid, failed, on hold, disputed.	
7	☐ Outstanding balance reduces by exactly the amount paid.	

7. Admin: payables and marking a café as paid (Admin login) - MOST IMPORTANT

	Check	Notes / Bug #
1	☐ Open Admin > Café Payables. Each café shows Pending settlement, Available to pay, and flags "No payout details yet" / "On hold" correctly.	
2	☐ Reconcile Now: asks for confirmation, runs, shows a result message. No money moves.	
3	☐ Run Weekly Payout: asks for confirmation, creates payout records only (does not send money). Running it twice does not double-count.	
4	☐ Open a café: the breakdown lists every booking that makes up the Outstanding amount. Add it up by hand and compare to the total.	
5	☐ Payout destination shows masked; "Reveal" shows the full bank/UPI details (needed before paying a bank payout).	
6	☐ Hold toggle: put the café On hold with a reason -> Mark as Paid button is disabled and the owner sees "On hold". Release hold -> works again.	
7	☐ Mark as Paid button stays DISABLED until ALL are filled: UTR/reference number, payment method, payment date, payment proof screenshot uploaded, and the confirmation tick box ("I confirm this payment was made...").	
8	☐ Upload the proof screenshot (JPG/PNG). "Proof attached - view" link opens it. Try a wrong file type or a huge file: a clear error appears.	

9	☐	Click "Mark Rs X as Paid": success, café outstanding drops to 0 (or the remainder), new row in Payout history with UTR, method, status Paid and a proof link.	
10	☐	Try submitting with an empty or duplicate UTR: the system blocks or warns.	
11	☐	Pay twice quickly (double click): only one payout is recorded.	
12	☐	Log in as that café Owner: the same UTR, amount, date and proof are visible (section 6).	
13	☐	A booking cancelled/refunded AFTER being paid out or while pending: the amounts correct themselves and nothing goes negative without a visible reason.	
14	☐	Admin > Audit log shows who recorded the payout and when.	

8. Admin: bookings, revenue and campaign reporting

	Check	Notes / Bug #
1	☐ Admin > Bookings: filter "Campaign only". Each campaign booking shows a campaign tag, the offer title, owner settlement amount and platform fee.	
2	☐ For one booking verify by calculator: Base - Discount = Subtotal; Fee = 4% of Subtotal; Customer paid = Subtotal + Fee; Owner gets = Subtotal.	
3	☐ Admin > Analytics > Revenue: campaign table shows bookings, discount given and revenue per campaign. Totals count only CONFIRMED and COMPLETED bookings.	
4	☐ A pending or failed payment booking is NOT counted in revenue.	
5	☐ Payments page: the Razorpay payment id matches the booking; captured amount = what the customer paid.	
6	☐ Promotions page: campaign and offers are listed; switching an offer off affects customers immediately.	
7	☐ Cafes / Verification queue / Users / Reviews / Support pages open without errors and search/filters work.	
8	☐ Export/CSV buttons (if any) download a file that opens correctly and numbers match the screen.	

9. General UI/UX (every page you touch)

	Check	Notes / Bug #
--	-------	---------------

1	☐	No text cut off, overlapping, or sideways scrolling on a small phone (360-400px wide). Buttons are easy to tap (not tiny).	
2	☐	Bottom navigation never covers a button or the price bar.	
3	☐	Loading states appear (not a blank screen); errors show a readable message and a way to retry.	
4	☐	Back button behaves sensibly everywhere (especially during checkout and after payment).	
5	☐	Page opens fast on mobile data. Note any page that feels slow (> 3 sec).	
6	☐	Spelling, wording and rupee amounts are consistent (₹ symbol, no 99.0000 or NaN).	
7	☐	Dark/light colours readable; contrast is fine outdoors in sunlight.	
8	☐	Log out and log in again on each portal; wrong-role access is blocked (an Owner cannot open /admin, a Customer cannot open /owner).	

10. Final sign-off

	Check	Notes / Bug #
1	☐	All sections ticked or every FAIL has a bug note with screenshot.
2	☐	Money cross-check done once end-to-end: Customer paid = Admin payment record = Owner booking amount + fee; Owner outstanding = Admin outstanding; after Mark as Paid both show the same UTR and balance.
